1. Introduction

This document describes the product specifications for 100G OpenZR+ QSFP-DD DCO modules based on DP-QPSK supporting extended C-band, polarization diversity coherent detection and advanced electronic link equalization. Chromatic dispersion compensation can be applied to the receive side of the demodulator. This module is managed utilizing the Two Wire Interface that is specified in the Common Management Interface Specification (CMIS). The module has following system performance and features:

1. Support Flex-grid channel spacing DWDM in C-band
2. Support Client-side Interfaces: CAUI-4
3. Support Line-side DP-QPSK with OFEC
4. Standard QSFP-DD type 2 form factor
5. 76pin QSFP-DD MSA compliant connector
6. Compliant to CMIS 5.0
7. Compliant to OIF Implementation Agreement for Coherent CMIS, Rev 01.1
8. RoHS compliant

Confidential

1.1 Typical Application

The application field of the module is widely used for short/metro haul. As shown in figure1, it is comprised of high-data lanes, a single 3.3V power supply, an IIC interface for module control and status report, and dedicated alarm and control pins (not shown on the figure1).

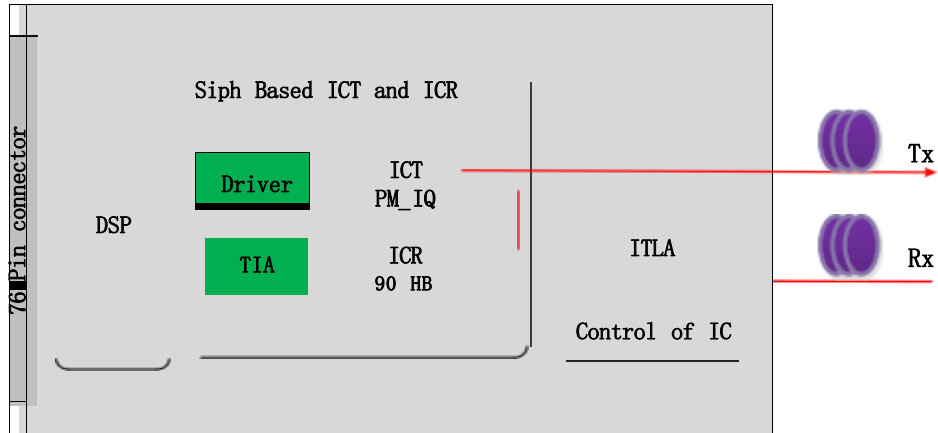

Figure 1: Functional Diagram of Module

1.2 Module Description

The module uses a 76-pin QSFP-DD MSA QSFP-DD Hardware Specification connector for all electrical interfaces with the host card, whereas the optical interfaces on the line side are provided through the optical receptacles on the QSFP-DD. The module can be partitioned into three functional parts: TX path, RX path and Control & Power block.

1.3 Path Description

The host interface is comprised of a total of 8 high-speed SerDes lanes. This allows module to support one interfaces for 100G application: Lane 1 - 4 is assigned.

1.4 OpenZR+ Mapping

The mapping of OpenZR+ application to CAUI-4 is shown in below figure.

Figure 2: OpenZR+ mapping

2. Module Configuration

2.1 Host Interface

The module support for wide applications with Host interfaces: CAUI-4. The Host interface conform to existing protocol standards and operate over standard physical layer specifications. The termination, mapping and/or aggregation of this signal is into an internal frame structure. The frame structure is then adapted to the FEC engine and DSP framed for transmission over the coherent media Interface. The Host interface signaling conform to existing protocol and electrical standards as defined by IEEE 802.3TM-2018.

Table 1: Host Interfaces

Id	Host Interface	Application Data Rate	Lane Count	Lane Signaling Rate	Modulation
1	CAUI-4	103.125 Gb/s	4	25.78125 GBaud (+/- 100 ppm)	NRZ

The host lane is assigned to Lane1-4 as shown in below figure 3.

SerDes Lanes	CAUI 4
Tx8[p,n];Rx8[p,n]	Reserved
Tx7[p,n];Rx7[p,n]	
Tx6[p,n];Rx6[p,n]	
Tx5[p,n];Rx5[p,n]	
Tx4[p,n];Rx4[p,n]	Default
Tx3[p,n];Rx3[p,n]	
Tx2[p,n];Rx2[p,n]	
Tx1[p,n];Rx1[p,n]	

Figure 3: Lane assignment

2.2 Media Interface

The media interface utilizes DP-QPSK modulation, polarization diversity coherent detection, and advanced electronic link equalization with chromatic dispersion and differential group delay compensation.

The module terminates the host interface signal(s) then maps and/or aggregates them into an internal frame structure. The frame structure is then adapted to the FEC engine and DSP framed for transmission over the coherent Media interface.

Table 2: Media Interface

Id	Payload	Baud Rate	Modulation	FEC
1	100G	30 Gbaud	DP-QPSK	OFEC

3. Product Specifications

3.1 Absolute Maximum Ratings

The absolute maximum ratings given in the table below define the damage thresholds. Hence, the component shall withstand the given limits without any irreversible damage.

Table 3: Absolute Maximum Ratings

Id	Parameter	Min	Max	Unit	Note
1	Storage Temperature	-40	85	°C	
2	Storage Humidity (Relative)	-	85	%	no-Condensing
5	Short term Operating Case Temperature		75	°C	
6	Power Supply Absolute Range	-0.3	3.63	V	
7	RX Optical Maximum Input Power	-	10	dBm	

3.2 Operating Condition

The operating condition given in the table below.

Table 4: Operating Condition

Id	Parameter	Min	Max	Unit	Note
1	Operating Case Temperature	0	75	°C	
2	Operating Humidity (Relative)	-	85	%	no-Condensing
3	Power Supply Operating Range	3.135	3.465	V	
4	RX Optical Input Power	-	0	dBm	

3.3 Electrical Specifications

3.3.1 Power Supply

The 100G OpenZR+ QSFP-DD DCO is a Power Class 8 module. In order to avoid exceeding the host system power capacity, upon hot-plug, power cycle or reset, all QSFP-DD modules shall power up in Low Power Mode if LPMMode is asserted. If LPMMode is not asserted the module will proceed to High Power Mode without host intervention. Specification values for maximum instantaneous, sustained and steady state currents at each power class are given in table 5. The power supply requirements are specified in the table below.

Table 5: Power Supply Specifications

Id	Parameter	Min	Typ.	Max	Unit	Note
1	3.3V DC Power Supply Voltage	3.135	3.3	3.465	V	
2	3.3V DC Power Supply Current			6	A	
3	Power Dissipation			16.5	W	
4	Low Power Consumption			1.5	W	
5	Module Inrush Current			100	mA/us	
6	Turn-off Current	-100			mA/us	
7	Power Supply Noise			25	mV	

3.3.2 Hardware Control and Status Pins

In addition to the 2-wire serial interface the module has the following low speed signals for control and status:

- ModSelL
- ResetL
- LPMMode
- ModPrsL
- IntL
- ePPS

3.3.2.1 ModSelL

The ModSelL is an input signal that shall be pulled to Vcc in the QSFP-DD module. When held low by the host, the module responds to 2-wire serial communication commands. The ModSelL allows the use of multiple QSFP-DD modules on a single 2-wire interface bus. When ModSelL is “High”, the module shall not respond to or acknowledge any 2-wire interface communication from the host.

In order to avoid conflicts, the host system shall not attempt 2-wire interface communications within the ModSelL de-assert time after any QSFP-DD modules are deselected. Similarly, the host must wait at least for the period of the ModSelL assert time before communicating with the newly selected module. The assertion and de-asserting periods of different modules may overlap as long as the above timing requirements are met.

3.3.2.2 ResetL

The ResetL signal shall be pulled to Vcc in the module. A low level on the ResetL signal for longer than the minimum pulse length (t_{Reset_init}) initiates a complete module reset, returning all user module settings to their default state.

3.3.2.3 LPMode

LPMode is an input signal. The LPMode signal shall be pulled up to Vcc in the QSFP-DD module. LPMode is used in the control of the module power mode.

See CMIS Section 6.3.1.3.

3.3.2.4 ModPrsL

ModPrsL shall be pulled up to Vcc Host on the host board and pulled low in the module. The ModPrsL is asserted “Low” when the module is inserted. The ModPrsL is deasserted “High” when the module is physically absent from the host connector due to the pull-up resistor on the host board.

Low speed signaling other than the SCL and SDA interface is based on Low Voltage TTL (LVTTTL) operating at Vcc. Vcc refers to the generic supply voltages of VccTx, VccRx, Vcc host or Vcc1. Hosts shall use a pull-up resistor connected to Vcc host on each of the 2-wire interface SCL (clock), SDA (data), and all low speed status outputs. The SCL and SDA is a hot plug interface that may support a bus topology. During module insertion or removal, the module may implement a pre-charge circuit which prevents corrupting data transfers from other modules that are already using the bus.

The QSFP-DD low speed electrical specifications are given in table 6. This specification ensures compatibility between host bus masters and the 2-wire interface.

Table 6: Low Speed Control and Sense Signals

Id	Parameter	Symbol	Min	Max	Unit	Condition
1	SCL and SDA	VOL	0	0.4	V	IOL(max)=3 mA for fast mode, 20 mA for Fast-mode plus
2	SCL and SDA	VIL	-0.3	V _{cc} * 0.3	V	
		VIH	V _{cc} * 0.7	V _{cc} + 0.5	V	
3	Capacitance for SCL and SDA I/O signal	C _i		14	pF	
4	Total bus capacitive load for SCL and SDA	C _b		100	pF	For 400 kHz clock rate use 3.0k Ohms Pull-up resistor, max.
				200	pF	For 400 kHz clock rate use 1.6k Ohms Pull-up resistor, max.
5	LPMode, ResetL, ModSelL and ePPS	VIL	-0.3	0.8	V	
		VIH	2	V _{cc} + 0.3	V	
6	LPMode, ResetL and ModSelL	I _{in}		360	uA	0V<V _{in} <V _{cc}
7	ePPS	I _{in}		TBD	uA	0V<V _{in} <V _{cc}
8	IntL	VOL	0	0.4	V	IOL=2.0 mA
		VOH	V _{cc} – 0.5	V _{cc} + 0.3	V	10k Ohms pull-up to Host V _{cc}
9	ModPrsL	VOL	0	0.4	V	IOL=2.0 mA
		VOH			V	ModPrsL can be implemented as a short-circuit to GND on the module

3.3.3 Management Interface

3.3.3.1 General Description

The management communication interface provides a number of elementary management operations that allow the host to read from or write to byte-sized management registers in the management memory map of the module. There are read and write operations both for single bytes and for contiguous byte sequences. Two types of read operations, either with implicit addressing (read from current address) or with explicit addressing, are supported.

The management communication interface distinguishes a master role and a slave role. The host shall be the master and the module shall be the slave.

The master initiates all operations that lead to data transfer. Data can be transferred from the master to the slave (in write operations) and from the slave to the master (in read operations).

3.3.3.2 Physical Layer

The physical layer supporting communication between host and module is the Two Wire serial Interface (TWI). The TWI consists of a clock signal (SCL) and a data signal (SDA).

SCL and SDA comprise a 2-wire serial interface between the host and module using the TWI protocol. SCL is defined as the serial interface clock signal and SDA as the serial interface data signal. Both signals are open-drain and require pull-up resistors to +3.3V on the host. The pull-up resistor value shall be 1k ohms to 4.7k ohms depending on capacitive load.

Both signals (SCL and SDA) are bidirectional open-collector pins and require an external pull-up to VCC on the host PCB. Activating the line requires pulling it down (wired AND). The total capacitance on the bus should not exceed 400pF.

This 2-wire interface supports bus speeds:

- Fast mode - I2C Fast-mode (Fm) \leq 400 kbit/s
- Fast mode plus - I2C Fast-mode Plus (Fm+) \leq 1 Mbit/s

The SDA signal is bi-directional. During binary data transfer, the SDA signal shall transition when SCL is low. SDA transitions when SCL is high are used to mark either the beginning (START) or ending (STOP) of a data transfer.

3.4 High Speed Electrical Specifications

The high speed signals consist of 8 transmit and 8 receive differential pairs identified as TX[8:1]p / TX[8:1]n and RX[8:1]p / RX[8:1]n. These signals can be operated in CAUI-4 depending on the capability of the host. CAUI-4 mode provides 4 differential lanes using NRZ signaling operating at 25.98 GBaud. This results in 4 lanes of 25Gb/s for a total of 100Gb/s. This mode allows connection to PMD configurations of CAUI-4. The default lane is assigned to TX1~4 and RX1~4 for CAUI-4 application.

The following electrical characteristics are defined over the Recommended Operating Environment unless otherwise specified.

Table 7: Electrical Characteristics for Transmitter

Id	Parameter	Min	Typ.	Max	Unit	Note
1	Signal Rate, each Lane	25.78±100ppm			GBaud	
2	Differential Peak-Peak Input Voltage Tolerance			900	mVpp	

Table 8: Electrical Characteristics for Receiver

Id	Parameter	Min	Typ.	Max	Unit	Note
1	Signal Rate, each Lane	25.78±100ppm			GBaud	
2	Differential Peak-Peak Input Voltage Tolerance		750	900	mVpp	
3	Transition Time, 20% to 80%		9.5		ps	

3.4.1 Loopback

The module support loopback functionality. The host loopback (Loopback ①) and the network loopback (Loopback ②) are shown at bellowing figure 4. For details on controlling the loopback mode, please refer to Reference [2]. In optional loopback, TXn is looped back to RXn, for example TX0+ to RX0+, on both host and media side.

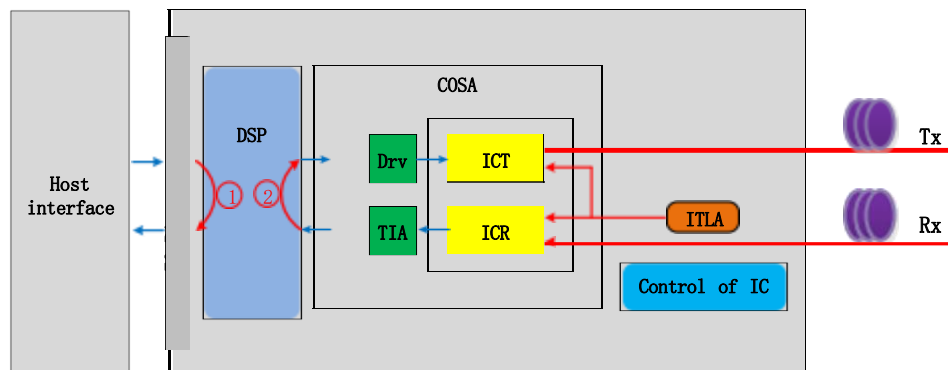

Figure 4: Module Loopback Orientation

3.5 Optical Specifications

All specifications given in this document are End-of-Life numbers and are valid under operating conditions unless specific noted:

3.5.1 Optical Transmitter Specifications

There are show all Transmitter specifications in the bellow table 9.

Table 9: Optical Transmitter Specifications

Id	Parameter	Min	Typ	Max	Unit	Notes
1	Transmitter Frequency Range	191.3	193.7	196.1	THz	C band 75GHz ITU-T grid. Frequency range over which the specifications hold unless noted otherwise.
2	Laser Frequency Stability	-1.5		1.5	GHz	Frequency stability relative to ITU grid.
3	Laser Frequency Accuracy	-1.5		1.5	GHz	
4	Laser Frequency Fine Tuning Range	-6.0		6.0	GHz	
5	Fine Tuning Resolution		100		MHz	
6	Channel Tuning Speed	-		60	s	
7	Laser LineWidth			100	kHz	
8	Transmitter Output Power Range	-7			dBm	
9	Transmitter Laser Disable Time			180	ms	
10	Output Power Stability	-1		1	dB	Difference over temperature, time, wavelength and aging.
11	Output Power Accuracy	-2		2	dB	Difference between the set value and actual value over aging.
12	Transmitter Turn-up Time from Cold Start	-		120	s	
13	Transmitter OSNR (Inband)	34		-	dB/0.1nm	
14	Transmitter Back Reflectance	-		-24	dB	
15	Transmitter Output Power with TX Disabled	-		-20	dBm	
16	Transmitter Polarization Dependent Power	-		1.5	dB	Power deference between X and Y polarization

3.5.2 Optical Receiver Specifications

Table 10 shows the general receiver specifications.

Table 10: Optical Receiver Specifications

Id	Parameter	Min	Typ.	Max	Unit	Notes
1	Receiver Frequency Range	191.3	193.7	196.1	THz	
2	Input Power Range	-18		0	dBm	
3	OSNR Sensitivity			12.5	dB/0.1nm	
4	Receiver Sensitivity		-32		dBm	Input power needed to achieve post FEC BER < 1E-15 when OSNR is > OSNR tolerance
5	Los Assert	-27		-25	dBm	
6	Los Hysteresis	1.0		2.5	dB	
7	CD Tolerance	20000			ps/nm	
8	DGD Tolerance	10			ps	Tolerance to PMD with < 0.5 dB penalty to OSNR sensitivity.
9	Peak PDL Tolerance	3.5			dB	Tolerance to peak PDL with < 1.3 dB penalty to OSNR sensitivity when change in SOP is <=1 rad/ms.
10	Tolerance to Change in SOP	50		-	rad/ms	
11	Input Power Transient Tolerance	-2		2	dB	Tolerance to change in input power with < 0.5 dB penalty to OSNR sensitivity.
12	Input Power Reading Accuracy	-2		2	dB	
13	Optical Return Loss	-20			dB	Optical reflectance at Rx connector input.
14	Receiver Turn-up Time from Cold Start	-		120	s	From module reset, with valid optical input signal present.

4. Mechanical Specifications

4.1 Mechanical Overview & Dimensions

The pluggable module fully compliant with the QSFP-DD Type 2 Module Specification, including dimensions and tolerances for the connector, cage and module system. The module shall be designed to be inserted into a host board with a railing system that includes a heat sink.

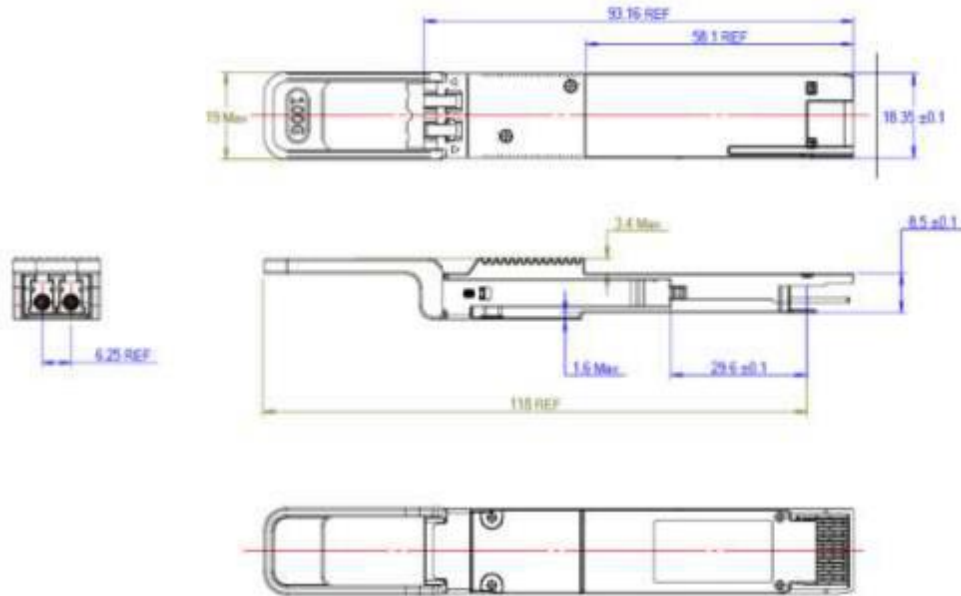

Figure 5: QSFP-DD Module Mechanical drawing

4.1.1 Insertion, Extraction and Retention Force

Table 12 details the mechanical forces to insert, remove, and retain the module in a standard QSFP-DD card cage.

Table 11: Insertion, Extraction and Retention Forces

Id	Parameter	Min	Max	Unit	Note
1	Insertion Force		90	N	
2	Extraction Force		50	N	
3	Retention Force	90		N	

4.2 Host Electrical Connector & Pin Assignments

The electrical interfaces, including pad assignments for data, control, status and power supplies and host PCB layout requirements, of the module is fully compliant with the QSFP-DD MSA QSFP-DD-Hardware Specification, Rev 5.0.

The case of the QSFP-DD module is isolated from the module’s circuit ground, GND, to provide the equipment designer flexibility regarding connections between external electromagnetic interference shields and circuit ground, GND, of the module.

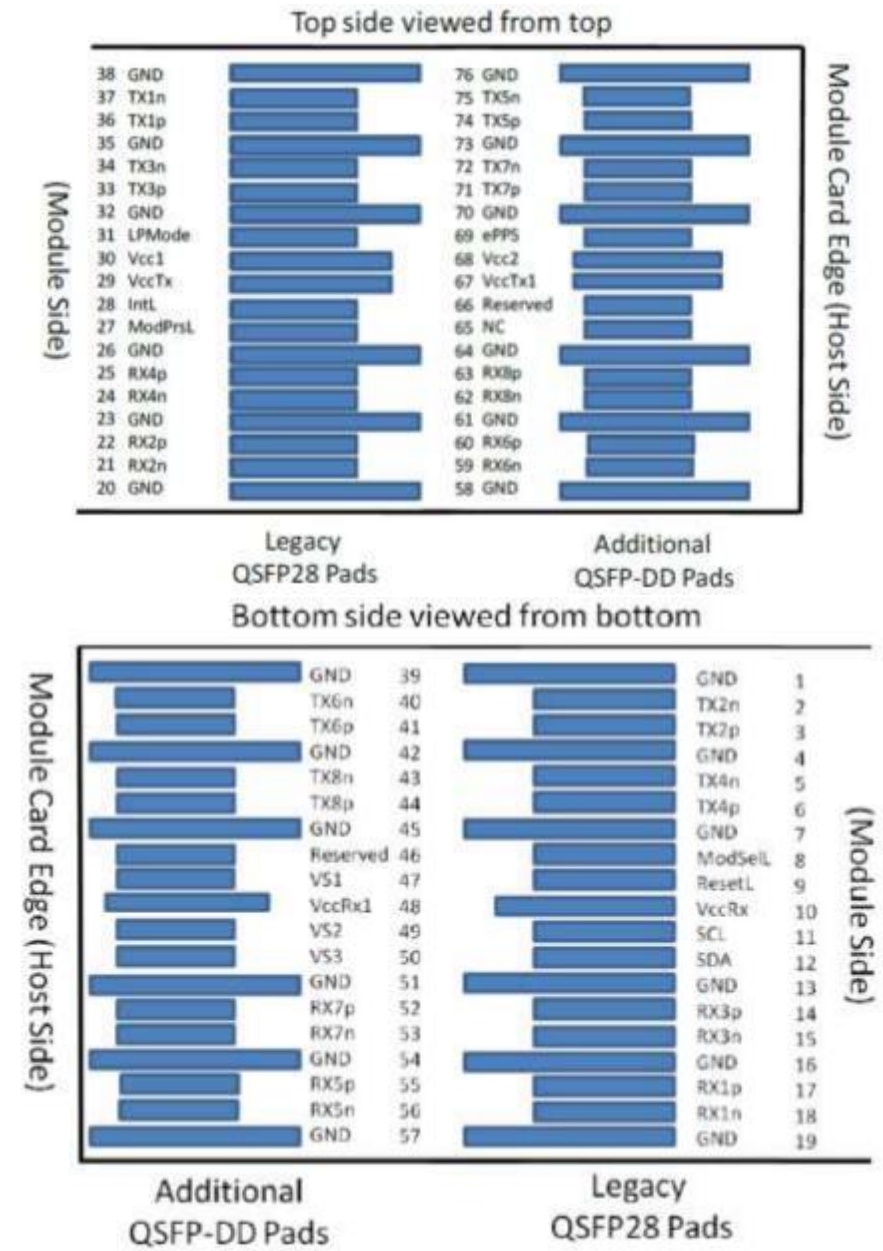

Figure 6: Module pad layout

5. Regulatory Specifications

5.1 EMI, EMC and ESD Specification

The module is compliant with the requirements listed in the table below when installed in the host equipment.

Table 13: EMI, EMC and ESD Specification

Id	Parameter	Reference	Value	Unit	Note
1	ESD Immunity	IEC 61000-4-2	8	kV	Contact Discharge
			15	kV	Air Discharge
2	ESD (HBM model)	JEDEC JESD22-A114-B	1	kV	High-Speed Contacts
			2	kV	Other pins
3	EMC Immunity	IEC 61000-4-3			
4	EMI Emission	FCC Class B			

5.1 Laser Safety

This is a Class 1 Laser Product according to IEC 60825-1:2007. This product complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated (June 24, 2007).

Don't directly look into the transmitter fiber connector at any time while the module is in operation.

6. Order Information

The part number of 100G QSFP-DD DCO is as described as following table.

Table 14: Part number of product

Part Number	Description
CT-QDS100SZPTA00	Single rate 100Gb/s OpenZR+, single channel tunable coherent QSFP-DD with OFEC, 0~75C
